R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

summary(cars)

```
##
        speed
                         dist
##
           : 4.0
                    Min.
                            : 2.00
    Min.
    1st Qu.:12.0
                    1st Qu.: 26.00
##
##
    Median:15.0
                    Median: 36.00
##
    Mean
            :15.4
                    Mean
                            : 42.98
    3rd Qu.:19.0
                    3rd Qu.: 56.00
    Max.
            :25.0
                    Max.
                            :120.00
```

Including Plots

You can also embed plots, for example:

Note that the echo = FALSE parameter was added to the code chunk to prevent printing of the R code that generated the plot.

```
plots <- read.csv(file = "../data-raw/plots.csv")
species <- read.csv(file = "../data-raw/species.csv")
surveys <- read.csv(file = "../data-raw/surveys.csv")
View(plots)
View(species)
View(surveys)</pre>
```

Homework: Why do we need to join data tables?

Left, Right, and Full joins, along with Inner, can join tables based on shared data columns.

```
inner_join(surveys, species, by = "species_id")
##
        record_id month day year plot_id species_id sex hindfoot_length weight
## 1
                 1
                       7
                           16 1977
